

SERVANT

The feeder machine to increase
your ironing performance

Feeding linen with the SERVANT

The turbo for your ironer

It is well-known that the productivity of STAHL flatwork ironers is already impressive, especially in regards to their relationship of energy input to production output. You can, however, increase this performance even further with the linen feeder machine SERVANT, by increasing the speed the linen is fed to the ironer.

The linen piece to be ironed is pulled into the feeder machine by a roller. This draw-in roller is positioned underneath the opening of the air duct. A suction device is situated in the feed area underneath the feed table. The suction underneath the belts holds the front seam of the linen piece. Spreaders – if desired spreader brushes can be installed additionally – pull the piece of linen into shape, smooth it and finally the transport belts feed the linen to the ironer.

The textiles are fed piece by piece directly one after another to the machine by one or two operators in a high processing speed. If the SERVANT is fitted with a clamp device, the machine can always be operated by just one person. The work is alternatively executed on 1, 2 or 3 lanes with a working width of 1.75 to 4 meters. A second suction device can be installed for the back seam of the linen to increase the output quality even further. The design of the exhaust ensures an easy cleaning of the air filter.

It goes without saying that the SERVANT can be connected to all STAHL flatwork ironers and it is also compatible to ironers of other manufacturers. We will gladly adapt the feeder to your machine.

With the convenient clamp device it is possible to operate the SERVANT by just one person - even with large pieces of linen.

sation to the processing speed or the ironer. In combination with STAHL ironers the drive is controlled by the ironer, in combination with other machines it is controlled by our feeder machine. The SERVANT is virtually maintenance free. We supply the machines in our powder coated standard colour white or in the colour of your choice. Further extras are available as for example a revolution speed controlled vacuum or a two-step switch for the ventilators.

Made by STAHL

We are a company with a long tradition and are now manufacturing laundry machines in the fourth generation. We are a dynamic, competent family operation with clear principles. Quality is the most important one, closely followed by innovation and the demand for economically and technically perfected products.

Our local team vouches for these principles, as Made by STAHL is for us implies the quality inherent in Made in Germany.

Of course, our commitment to quality also extends to the protection of our environment. We guarantee the separability of the materials for recycling purposes as well as the application of ecologically save production methods. This includes the use of powder coating instead of varnishes, which has the further advantage of greater durability. Our greatest contribution to environmental protection, however, is the long service life of our products.
